The Closed-Duct PRIME model is provided in two file formats compatible with many popular commercial CAD software. Additionally, 13 triangular surface meshes (coarsest to finest mesh: $\sim 1 \times 10^4$ to $\sim 44 \times 10^6$ elements) are provided in two file formats. All model and mesh files are that of the full-scale ($L \approx 49.4$ ft, the largest size in the problem set).

Model File: IGES Format

IGES or IGS file is a standard text-based graphics file based on the Initial Graphics Exchange Specification (IGES). The Closed-Duct PRIME model in IGS format is contained in the file "Closed-Duct_PRIME_model_s7.igs".

Model File: STL Format

STL is a commonly used file format for additive manufacturing. The Closed-Duct PRIME model in STL format is contained in the file "Closed-Duct_PRIME_model_s7.STL". This file was used to additively manufacture the scale models measured in [1].

Mesh Files: INP Format

The triangular surface meshes are provided in INP format. The first line contains the number of nodes, *Nnodes*, and triangles, *Ntris*, in the mesh. The next *Nnodes* lines contain the x,y,z coordinates for each line. The final *Ntris* lines of the file contain the connections for each triangular element in the mesh.

Mesh Files: UNV Format

The triangular surface meshes are provided in Universal File (UNV) format.

Uncompressing of Mesh Files

Due to Github's intrinsic file size limit (100 MB), all mesh files were zipped. They can be uncompressed using standard zip programs.

The finest INP format mesh files “Closed-Duct_model_meshEF”, “Closed-Duct_model_meshFF”, “Closed-Duct_model_meshFG”, and “Closed-Duct_model_meshGG” were split into 2, 4, 6, and 12 files, respectively and then separately zipped.

The finest UNV format mesh files “Closed-Duct_model_meshEE”, “Closed-Duct_model_meshEF”, “Closed-Duct_model_meshFF”, “Closed-Duct_model_meshFG”, and “Closed-Duct_model_meshGG” were split into 2, 3, 7, 12, and 24 files, respectively and then separately zipped.

After uncompressing, the files should be concatenated into a single file; e.g., the following linux commands will concatenate the files:

```
cat Closed-Duct_PRIME_model_meshDE.inp* > Closed-Duct_PRIME_model_meshDE.inp
cat Closed-Duct_PRIME_model_meshDE.unv* > Closed-Duct_PRIME_model_meshDE.unv
```
