

Figure 1: The HH ($\sigma_{\phi\phi, \text{dB}}$, left) and VV ($\sigma_{\theta\theta, \text{dB}}$, right) polarized RCS for the dielectric water sphere of diameter 0.6 m at frequency 10 MHz.

Figure 2: The HH ($\sigma_{\phi\phi, \text{dB}}$, left) and VV ($\sigma_{\theta\theta, \text{dB}}$, right) polarized RCS for the dielectric water sphere of diameter 0.6 m at frequency 320 MHz.

Figure 3: The HH ($\sigma_{\phi\phi, \text{dB}}$, left) and VV ($\sigma_{\theta\theta, \text{dB}}$, right) polarized RCS for the dielectric water sphere of diameter 19.2 m at frequency 10 MHz.

Figure 4: The HH ($\sigma_{\phi\phi,\text{dB}}$, left) and VV ($\sigma_{\theta\theta,\text{dB}}$, right) polarized RCS for the dielectric water sphere of diameter 19.2 m at frequency 320 MHz.

Figure 5: The HH ($\sigma_{\phi\phi,\text{dB}}$, left) and VV ($\sigma_{\theta\theta,\text{dB}}$, right) polarized RCS for the dielectric water sphere of diameter 0.6 m at frequency 80 MHz.

Figure 6: The HH ($\sigma_{\phi\phi,\text{dB}}$, left) and VV ($\sigma_{\theta\theta,\text{dB}}$, right) polarized RCS for the dielectric water sphere of diameter 0.6 m at frequency 80 MHz with $\epsilon = \epsilon_0(78.98 - j0.2)$.

These RCS results were calculated by using the COMPASS-EM code [1].
